

GS-660 Jumbo Tufter

Jumbo Tufter

The G660 JUMBO TUFTER is a heavy-duty mattress compression machine used for hand tufting. This type of mattress has always enjoyed a privileged position in the bedding market where, together with traditional side stitching, it epitomises the hand made craft product of the past. It also provides customers with the reassurance of traditional materials and workmanship and the status premium merchandise brings to the purchaser.

The G660 JUMBO TUFTER is a king size compression tufting machine that depresses and tufts very large and heavy mattresses. Tufting is the ultimate in traditional methods of restricting the movement of upholstery fillings while still presenting a sumptuous 'deep comfort' appearance.

The G660 is entirely powered by pneumatics, making it a reliable, low-maintenance machine that is simple to use and very productive. This machine can create a new marketing opportunity for premium mattress products!
